

FOR IMMEDIATE RELEASE  
December 1, 2017

## **Publication announcement: Headington Institute Resilience Inventory (HIRI)**

It is with pleasure that we announce that an article highlighting the Headington Institute Resilience Inventory (HIRI) has been accepted for publication by the journal: International Perspectives in Psychology: Research, Practice, Consultation. As stated on their website, this journal “is committed to publishing research that examines human behavior and experiences around the globe from a psychological perspective.”

We’re honored to be included in an APA Journal of IPP’s reputation and are delighted with the global focus and multi-national editorial board of this journal. This publication represents an important step in demonstrating high academic standards and rigorous peer review in the development of this inventory.

The Headington Institute Resilience Inventory was developed to gain a new understanding of what most directly helps and inhibits the wellbeing and resilience of global humanitarians. In particular, the HIRI highlights key factors of resilience with corresponding behaviors that support wellbeing and recovery. Validated with data from over 3,000 participants and 130 countries, the HIRI is intended to adequately reflect the diverse humanitarian community. It is our hope that the HIRI can be used widely to support individual wellbeing and recovery, and enhance the effectiveness of staff wellbeing programs.
